**Specimen type:** Conventional  Liquid based  E.Prep

**Specimen adequacy:**

Satisfactory for evaluation  Endocervical / transformation zone present

Specimen processed and examined, but unsatisfactory for evaluation, see comment

No transformation one component present

**General categorization:**

Negative for intraepithelial lesion or malignancy

Epithelial cell abnormality: see below  Other: see interpretation/ result

**Interpretation/ result: (Other non-neoplastic findings)**

Reactive cellular changes associated with:  Organisms:

Inflammation  Fungi, consistent with candida spp.

Atrophy with inflammation  Trichomonas vaginalis

Tissue repair  Shift in flora suggestive of bacterial vaginosis

Metaplastic cells  Bacterial consistent with actinomyces spp.

Keratinized cell  Cellular changes consistent with herpes virus

Follicular cervicitis  Suggestive for chlamydia

IUD changes

Radiation injury

Other:  Endometrial cell (valid in women >45)

**Epithelial cell abnormalities**

**SQUAMOUS CELL:**

Atypical squamous cell:

of undetermined significance (ASC-US)  Can not exclude HSIL (ASC-H)

Low grade squamous intraepithelial lesion (LSIL)

High grade squamous intraepithelial lesion (HSIL)  Squamous cell carcinoma

**GLNDULAR CELL:**

Atypical  Endometrial cells  Endocervical cells  Glandular cells

In favor of neoplastic  Adenocarcinoma

**Comment and recommendation:**

Repeat Pap smear after treatment  Repeat Pap smear after 4 months

Colposcopy recommended  Biopsy is suggestive

HPV genotyping recommended  Routine follow up

**Pathologist Signature:**
